

Did you know GPS offers a new way to clean air?

The GPS i-Clean is an award winning innovative product that is a whole new way to clean air.

GPS i-Clean:

- Kills Viruses and Bacteria
- Kills Mold
- Reduces Odors and VOC's
- Reduces Airborne particles
- Cleans Air & Surfaces
- Reduces Allergens
- Produces no harmful by-products or ozone
- Self-cleaning
- UL and cUL Listed
- 24 Volt – 240 Volt wiring options

The GPS-iClean wins GOLD in the national ACHR NEWS CONTEST!
Best new IAQ Product of 2016 - No Maintenance, & No Replacement Parts

GPS i-Clean is an ion generator that is easily installed in a new or existing system. Ion generation is a proven technology in our industry and offers many advantages over the older UVC technology.

GPS i-Clean is self-cleaning with no maintenance required. This compares to UVC lamps that require bulbs to be replaced on an annual basis. UVC light can also be harmful to vision and any exposure during operation should be avoided. GPS i-Clean is safe and allows the operator to be in full contact with the device, even while in operation.

GPS i-Clean produces ions that travel through ductwork and discharge into space. The capacity of ion generation does not reduce over time. UVC lamps are only effective where the UVC light illuminates and requires time duration of exposure to be effective.

Learn more about ion technology and the advantages over UVC lamps by contacting your local Stan Weaver Engineering Team:
