

Did you know Greenheck offers outdoor air handling units?

We are certain you know that Greenheck is the leading fan, louver, and damper manufacturer in our industry. But, did you know that Greenheck also manufactures outdoor air handling units? These units offer the same proven quality and competitive pricing you expect from Greenheck.

The Greenheck outdoor air handling units are models RV and RVE (with energy recovery). They are designed to condition and deliver mixtures of outdoor and return air. The models RV(E) are available from 5 to 45 tons (800 to 13,500 CFM) and include features such as factory mounted variable frequency drives (VFD) for supply air volume control, outdoor and return dampers for mixed air control, an onboard microprocessor system for precise temperature and humidity control, and hot gas reheat.

The RV(E) also has industry leading low sound condenser fans that reduce sound levels by up to 50% compared to traditional condenser fans.

Attached you will find the Greenheck brochure on the RV(E) outdoor air handling units. For more information, selection, or pricing on the Greenheck outdoor air handling units contact your [Stan Weaver Engineering Team](#):

1- Plenum Supply/Exhaust Fan

2- Double-wall Construction

3- MERV 8, 12 or 14 Filters

4- Control Center

5- Optional Weatherhood

6- Optional Energy Wheel (RVE)

7- Chilled Water or DX

8- Optional Compressors

9- Optional Heat

10- Outdoor & Recirculating Air Dampers

11- Optional Reheat

Blue = standard; Red = optional
